### TESTIMONIAL

I have known Mr Doshagyasing Gowardun for his exceptional dedication and passion for programming. Having known him as a high school student during my tenure as the school principal, I can confidently say that he is a truly remarkable individual.

Throughout the four years that I have known him, Doshagyasing consistently impressed his teachers and peers with his innovative approach to learning. His ability to translate theory into practical applications was nothing short of astounding. It was no surprise that the school administration recognised his talent and entrusted him with designing the school website, a task he executed with mastery.

Doshagyasing's enthusiasm for using programming to enhance the school's back-end administration was both admirable and impactful. As the school principal, I had the privilege of working closely with him on this project. He diligently collaborated with me to understand the school's routines and requirements, eliciting algorithms that he skilfully transformed into software compatible with Windows, Mac, iOS and Android platforms. The final product was not only user-friendly but also boasted an appealing dashboard and genuinely crafted functionalities.

His proficiency in listening to clients and interpreting their needs into effective applications is a rare and valuable trait. This, coupled with his astuteness, makes him stand out as a programmer with the potential to surprise and impress many. It is to the knowledge of many that Doshagyasing's services have been retained by gaming companies to untap his potential.

As I have now moved on to be the Acting Director of e-Education at the Ministry of Education, Tertiary Education, Science & Technology, I am proud to say that I am currently piloting the software Doshagyasing developed for time-tabling and student movement in a few schools. The positive impact it has already shown gives me confidence that it will prove to be an invaluable tool when implemented in other schools.

I wholeheartedly commend Mr. Doshagyasing Gowardun for his outstanding work, passion, and dedication to programming. He is a young talent with immense potential to make a significant difference in the world of technology and beyond. I have no doubt that he will continue to achieve great success in his future endeavours.
